

eID Activation and PIN Management Software

eID Management Software provides the eID card management – eID card activation, unblock eID PIN and change eID PIN. eID Management System is deployed at Police Departments and Information Kiosks. System is based on client-server architecture.

eID Management Server

Provides CSCA and CV certificates for the verification of eID and for creation of a secure EAC channel to the eID
Manages the issuance and automatic renewal of CV certificates
Manage sensitive data in a HSM

eID Management Client Software

Provides the application-support exposing interfaces with defined eID card management functionality
Handles the communication with the smart cards through a PC/SC standard interface
Communicates securely with the eID Management Server

Key Features

- Distributed eID Management System of the client-server type
- Client authentication
- Integration with certification authority PKI (CSCA, CVCA/DVCA)
- Client integration components available as libraries with an integration API for .NET and Java development platforms
- Support of all smart card readers compliant with PC/SC standard

Main Benefits

- Activate eID card for electronic authentication and identification in communication with eGovernment services
- Unblock PIN after it was blocked by the user
- Change PIN to a new value if the user forgot it
